

CINEMATIQUE INSTRUMENTS

SPECIMENPHONE

HOW TO INSTALL

To install, unzip and drag the instrument folder to any hard drive. Launch Kontakt 4.22 or higher and load the .nki instruments. Please do not move any file! By installing the product you accept the enclosed product license agreement.

DESCRIPTION

Specimenphone ! What could this be? It is an assortment of lots of metal bars which are freely hanging on a metallic frame. The object looks like a giant mallet instrument.

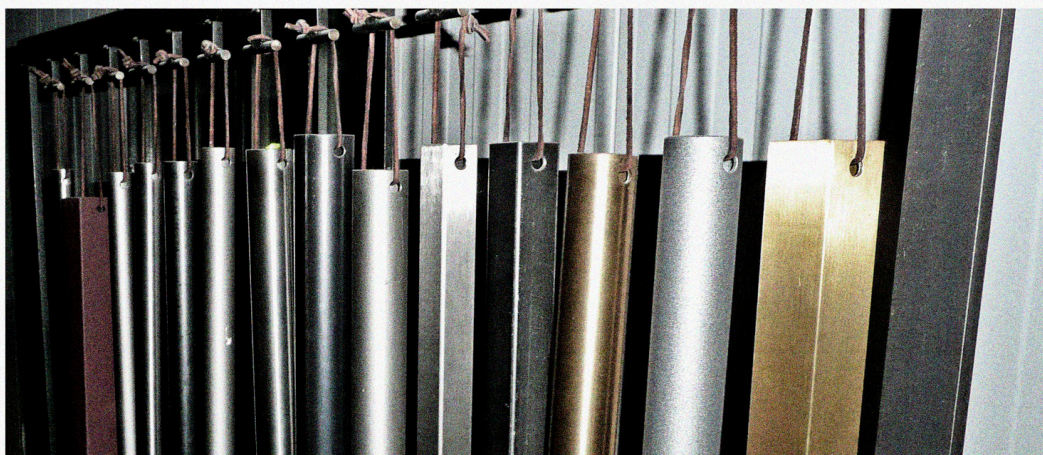

The bars are metallic product samples which are used to demonstrate different kinds of metall, different sizes and forms such as square chrome bars, brass table legs or steel poles. The length of these metallic objects varies from 1 meter (40 inch) to nearly 2 meter (75 inch).

CINEMATIQUE INSTRUMENTS

CONTENT

We hit all 18 bars and poles with a stick as well as with a rubber hammer in 1-3 velocity layer and 3 Round Robin variations. The sound we recorded with a stick are layered along the white keys, the other along the black keys. In addition to this we provide different options to shape the sound: A cabinet and a rotary simulation, 2 different delays, a reverb and a knob to adjust the release of the sounds. Finally we included the default arpeggiator of Kontakt with some presets.

All in all we are coming up with an instrument with a couple of weird and unique sounds. You can create sounds you never heard before. It is a great fun to play with Specimenphone

We wish a great deal of fun and inspiration using our instruments!
